# **Capitol Region Watershed District**

- 41 Square Miles
- Portions of 5 Cities
- Population: 245,000
- 42% Impervious Surfaces
- 4 Lakes (Como, Crosby, Loeb, McCarrons)
- All Runoff Ultimately Flows to the Mississippi River

- Address Needed Storm Sewer
- Improvements

  Improve Water Quality by
- Reducing the Amount of Phosphorous Discharging to Como Lake
- Determine Equitable Distribution of Costs

# Arlington Pascal Stormwater Improvement Project

- Original Project Cost: \$2.5 Million
  - 60" Storm Sewer Pipe
  - No Water Quality Benefits
- Final Project Cost: \$2.0 Million
  - 18 Stormwater BMPs
  - Stormwater Volume and Pollutant Reduction Benefits
     \*Costs do not include bond interest
- Final Total Project Capital Cost: \$2.7 Million \*Total Capital Cost = Construction + Design + Bond Interest

### **Stormwater BMPs Constructed**

- Underground Stormwater Storage and Infiltration System (Arlington-Hamline Facility)
- Regional Stormwater Pond (Como Park Regional Pond)
- 8 Underground Infiltration Trenches
- 8 Rain Gardens

### **Stormwater BMPs**

- Treatment Train of BMPs
- Total Drainage Area: 190 Acres
- Combined Storage Area: 141,553 ft<sup>2</sup>
- Combined Storage Volume: 444,390 cf

### Underground Stormwater Storage and Infiltration System (Arlington-Hamline Facility)

- Total Capital Cost: \$799,000
- Storage Volume: 85,813 cf
- Drainage Area: 50 Acres
- 849 Feet of 10-Foot Diameter, Corrugated, Devference of Matel Diage

### **BMP Stormwater Monitoring**

#### 2007 & 2008

- Arlington-Hamline Facility
- 2 Infiltration Trenches (Trenches 4 and 5)
- 8 Rain Gardens
- Como Park Regional Pond (2008 Only)

### **BMP Monitoring Methods**

- Inlet and Outlet Monitored (except Rain Gardens)
  - Continuous Water Level and Flow Recorded Every 10 Minutes
- Water Quality Samples Collected During Storm Events
- For Each Storm Event and Monitoring Season:
  - Determined Total Flow and Calculated Total Phosphorous (TP) and Total Suspended Solids (TSS) Loads
- Also Determined Total Solids Loads Removed

### **Total Solids Load**

#### • Sum of:

- Total TSS Load Removed by BMP
- Settleable Solids Captured by BMP
- Settleable Solids Captured by Pretreatment Units

Settleable Solids are Particles Larger than Suspended Size (Debris Such as Floatables, Organic Matter, and Sediment).

- Settleable Solids were Measured in Pretreatment Units for Arlington-Hamline Facility and Infiltration Trenches
- Settleable Solids Captured by Rain Gardens and Como Park Regional Pond Were Estimated

### **P8 Model**

- Simulated the Performance of Each BMP over an Entire Year
  - Total Discharge and TP and TSS Loads
- Calibrated Using Actual Precipitation Data and 2008 BMP Monitoring Data
- Annual Results for 2007, 2008, and an Average Precipitation Year (Projected Annual)

### **BMP Operation and Maintenance**

- Developed a Manual of Inspection and Maintenance Protocols
- Documented Activities Using Electronic Field Forms
   BMP, Activity, Staff, Time
- Staff Labor Rates Determined and Used to Calculate Labor Costs of Each Activity
- Determined Annual Operation and Maintenance Costs
   2007, 2008, Projected Annual Year

### **BMPs Maintained**

#### 2007 & 2008

- Arlington-Hamline Facility
- Vortech<sup>®</sup> Unit
- 8 Infiltration Trenches
  - 30 Sumped Catch Basins
  - 16 Sumped Manholes
- 8 Rain Gardens
- Como Park Regional Pond (2008 Only)

### Conclusions

- BMP monitoring is important
- BMPs are performing as or better than expected
- Properly <u>designed</u>, <u>constructed</u>, and <u>maintained</u> BMPs are exhibiting high removal efficiencies
- Volume reduction and pollutant removal costs are largely affected by volume and pollutant load reductions
- Pond had the lowest removal costs
- Few studies which have this type of comprehensive analysis
- Continue research
- Pretreatment units are very beneficial
